DEPOSITS OF CASSITERITE ARE PROVEN TO EXIST IN NEVADA

at Battle Mountain has led to inquiries at the Mackay school of mines as to the method of prospecting for as to the method of prospecting for the field. Director Lincoln PEKING, Jan. 30.—The Manchu spent last year in Bolivia, which is imperial family has agreed to hay association of headmasters in the hartin Cafferata the only important tin producing aside its official release and to as the only important tin producing aside its official robes and to ascountry in the western hemisphere, sume instead the official dress of and makes the following suggestions the republic-the frock coat and silk covering these points:

Cassiterite is a hard, heavy, non- who is to all intents regent for the metalic mineral, ranging in color disposed boy emperor, has also been from light brown to black. It is most persuaded by the government of readily confused with the oxides of President Yuan to permit any palace iron-hematite and limonite-but it servant who prefers short hair to is much heavier than these, having a dispense with his queue. The Manspecific gravity of seven, whereas chus of the palace are as a class the limonite has one of 4 and hematite only people in Peking who still wear one of 5. Moreover, both the iron the so-called pig-tail. Princes when exides are soluble in acid, whereas serving at the court always appear cassiterite is not attacked even by in their robes and wearing a queue;

the tin prospector carries into is false, and when the princes appear the field some muriatic acid, grant elsewhere they are generally in ordilated zinc and a test tube, he can nary Chinese dress or in foreign very readily test for cassiterite after clothes with their hair cropped the following manner: Place a piece short. The servants, however, have of granulated gine in the bottom of been loathe to change without sanca test tube, put a fragment of the tion from the Empress Dowager, mineral to be tested on top of this and cover both gine and mineral with muriatic acid. The zinc will discovered among employes in the then dissolve with violent bubbling office of the Danberg Land and Livedue to the freeing of hydrogen and stock company at Minden, and Dr. this nascent hydrogen will come in Maclean of Carson City has been contact with the mineral. If the called upon to investigate and take mineral is cassiterite, tin will be re- steps to prevent a spread of the duced on its surface, forming a sil- disease, very metallic coating. This adheres so strongly that if the specimen is rubbed it will polish the coating withit if on the other hand, the fragment is not cassiterite, no such coating will be found.

tin may occur distributed throughout the upper part of the gravel, especially if the valley is large and the stream small. As the prospector works up stream toward the source of the tin, the particles of stream tin will become more angular and larger. just as the gold colors become rougher and larger as the prospector approaches a gold lode. Thus it is that prospecting for tin placers and tin lodes is to every respect similar to prospecting for gold placers and gold
